Foundation of Cardiac Surgery Development

FUNDACJA ROZWOJU KARDIOCHIRURGII
im. prof. Zbigniewa Religi

Foundation of Cardiac Surgery Development (*Fundacja Rozwoju Kardiochirurgii, FRK*) was established in 1991 and its main goal has been to support the development of Polish cardiac surgery as well as to introduce into clinical usage modern technologies of heart treatment, including introduction of first Polish mechanical heart assist prosthesis. For this purpose, FRK, created in 1993 its own Heart Prosthesis Institute, which consistently conducts research and development work related to the Polish artificial heart, biological heart valves, cardiac surgery robots and, recently, development in biotechnologies for heart prosthesis.

The Polish Program Milestones

- **1985** – The first successful heart **transplantation** in Poland, performed in Zabrze by prof. Z. Religa
- **1986** – The first implantation of **mechanical heart assistance** in Poland - the **BRNO** LVAD, performed in Zabrze by prof. Z. Religa with J. Vasku team of **Univ. Brno (Czech)**
- **1987** – The first implantation of **artificial heart** in Poland – the **BRNO TAH VII**, performed in Zabrze by prof. Z. Religa with J. Vasku team of **Univ. Brno (Czech)**
- **1987** – The first implantation in Poland of Russian TAH **POISK** performed in Zabrze, by prof. Z. Religa with W. Szumakow team of Transplantology Inst. **Moscow**
- 1987 – The first xenotransplantation
- **1993** – The first implantation of **POLVAD**; Zabrze, Z. Religa team
- **1997** – The first implantation of **POLTAH**; Zabrze, Z. Religa team
- **2000** – start of **Robin Heart Project**

Foundation of Cardiac Surgery Development

Polish Ventricular Assist Device POLVAD 1993

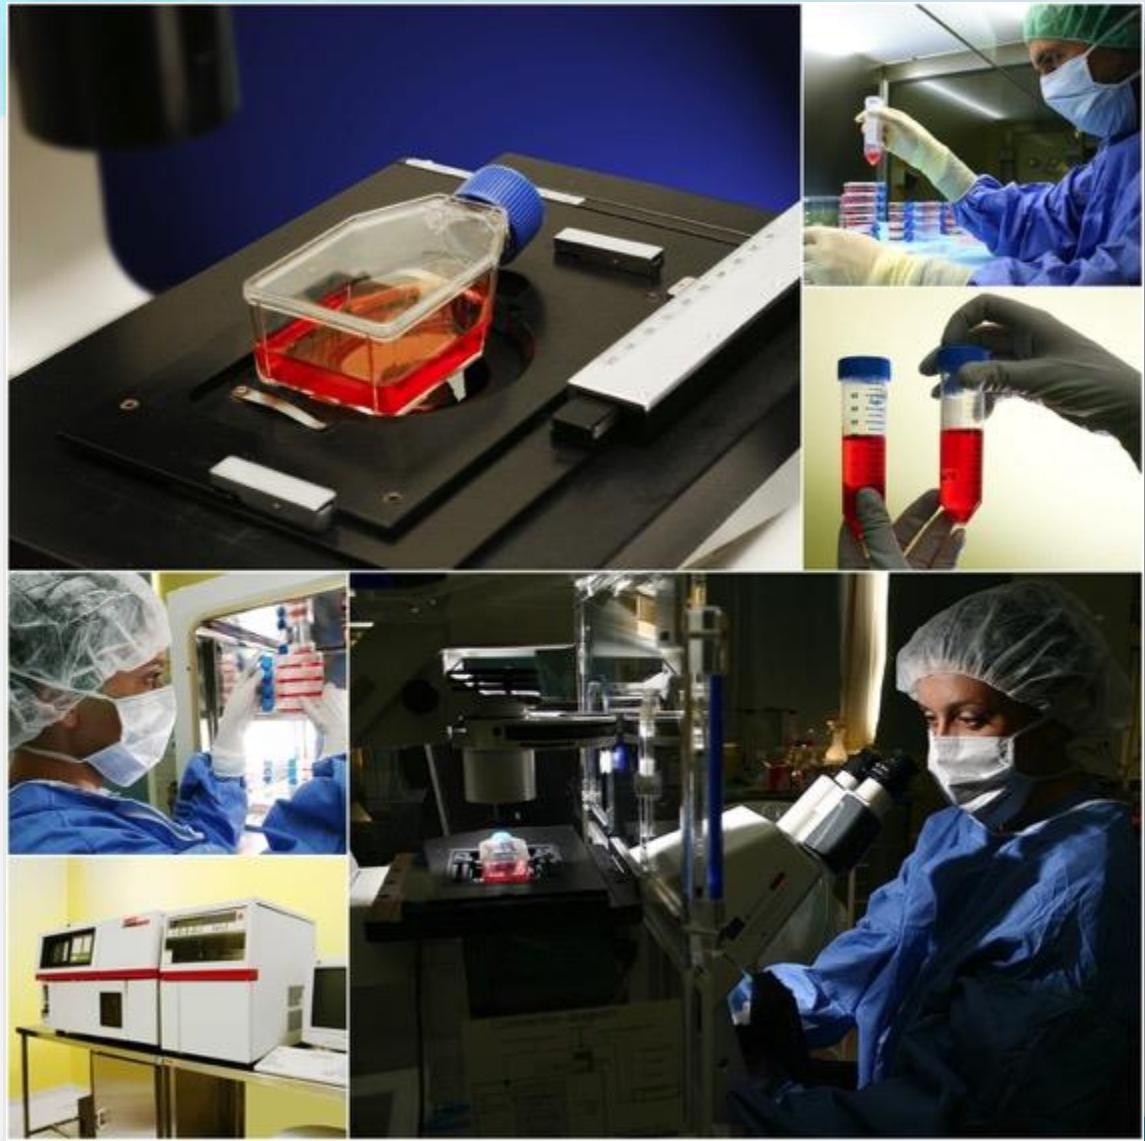

"Tissue Engineering and Biological Heart Valves Prostheses" program - research on the construction and technology of manufacturing biological heart valve prostheses and other biomaterials produced by tissue engineering and cell culture.

Polish Artificial Heart program – research on the development of the construction, manufacturing technology and clinical use of heart prostheses and the development of cardiovascular support methods

The "**Robots and Innovative Tools of Surgery**" program - research on robotic and semi-automatic tools for minimally invasive cardiac surgery, research in the field of biocybernetics on systems supporting medical technologies, development of a tool system supporting surgery planning and surgeon training.

PROJECTS in 2018

Projekt pn.: „**Wprowadzenie do praktyki klinicznej oryginalnej polskiej wszczepialnej wirowej pompy wspomagania serca oraz systemu zdalnego monitorowania i nadzorowanej zdalnie rehabilitacji pacjentów na wspomaganiu serca**” finansowany przez Narodowe Centrum Badań i Rozwoju w ramach Strategicznego Programu Badań Naukowych i Prac Rozwojowych „Profilaktyka i Leczenie Chorób Cywilizacyjnych” – STRATEGMED, projekt konsorcjny.

Projekt „**4 Dimensional Single Piece Miniaturized Blood Rotor (4Dblood ROT)**” realizowany w ramach programu M-ERA.NET projekt konsorcjny.

Projekt pn.: „**Nietrombogenne kompozyty metalowo-polimerowe z adoptowalną elastycznością w skali mikro i makro dla nowej generacji zastawek, dedykowanych dla systemu wspomagania serca – bioVALVE**” projekt realizowany w ramach programu M-ERA.NET projekt konsorcjny.

Projekt badawczy pn.: „**Ocena hemodynamicznej istotności zwężeń tętnic wieńcowych metodą modelowania numerycznego w oparciu o wirtualny test wysiłkowy**” realizowany w ramach konkursu OPUS 8 Narodowego Centrum Nauki.

Projekt „**Zadajnik ruchu z realizacją siłowego sprzężenia zwrotnego**” realizowany w ramach konkursu LIDER 8 Narodowego Centrum Badań i Nauki

Projekt pn.: „**Opracowanie innowacyjnej, bioaktywnej protezy zastawki serca**” Program Badań Stosowanych NCBR, projekt konsorcjny.

Projekt pn.: „**Mezenchymalne komórki zrębu oraz wzbogacony nimi skafold jako alternatywna forma terapii chorych z niewydolnością serca - PHOENIX**” finansowany przez Narodowe Centrum Badań i Rozwoju w ramach Strategicznego Programu Badań Naukowych i Prac Rozwojowych „Profilaktyka i Leczenie Chorób Cywilizacyjnych” – STRATEGMED, projekt konsorcjny.

Projekt badawczy pn.: „**Interdyscyplinarne metody tworzenia i funkcjonalizacji materiałów biomimetycznych bazujące na odkankowej macierzy zewnątrzkomórkowej**” realizowany w ramach konkursu OPUS 12 Narodowego Centrum Nauki.

Projekt pn.: „**Sieć Regionalnych Obserwatoriów Specjalistycznych w Procesie Przedsiębiorczego Odkrywania (SORIS w PPO)**” finansowany przez w ramach RPO WSL na lata 2014 – 20120, Działanie 1.3. Profesjonalizacja IOB projekt konsorcjny.

Projekt pn.: „**ProVaHealth – Product Validation in Health**”, realizowany w ramach Programu Interreg Baltic Sea Region UE, projekt konsorcjny.

Infrastructure

A three-storey building with a basement - an area of 2800 m²

Air conditioning (separate for tissue bank and TAH LAB)

Own gas heating

Power - vacuum pumps

Power supply - compressed air pumps

Electrical supply - 24 hours safe

Supply - in liquid nitrogen for a tissue bank

Computing cluster

IT INFRASTRUCTURE

At present, the Foundation has a server room equipped with modern computing servers and a professional disk array. The use of a strong server, equipped with a large amount of working memory and supported by GPU processors, allows for a significant increase in efficiency and quality of numerical analyzes.

The cluster uses the Ansys HPC calculation technology. This allows the use of a queuing system, and interactive applications such as Ansys (calculation of fluid flows).

The disk array is used, among others for storing data generated by programs working in the cluster, as well as a data warehouse (backup) of all employees of the FRK

FRK computing cluster - 144 computing cores on Xeon processors, a total of 1.4TB of RAM. Computing power ~ 33 TFLOPS including 8 TESLA cards by ~ 3 TFLOPS each.
